This tank-mix summary sheet provides information in addition to what appears on product labels. Dow AgroSciences supports the safety and efficacy of its products for tank-mixes shown as Physically and Biologically Compatible, but does not warrant the efficacy of other tank-mix partners. Where only Physical Compatibility or Sprayable with Continuous Agitation is shown, Dow AgroSciences has no biological data regarding efficacy or crop safety and only supports the compatibility, so growers use these mixes at their own risk.

For tank-mixes of more than two products which are not specifically listed, only what is known about the products when in two-way mix is shown, users must make their own judgment about the more complicated mixes which they may choose to use at their own risk. Similarly, a number of products are shown which have been replaced by more recent formulations for which tests have not been carried out. However the information is included for the user to draw their own conclusions.

Important Note: tank-mixes should only be made within the label recommendations of every product in the application.

NOTES:

Under frosty conditions avoid tank mixes.

* An interval of 14 days must be observed between applications of Equity and Broadway Star or Lexus SX, regardless of weather conditions.

** Leave a 4 week gap.

Contact Bayer CropScience for the latest advice on sequencing Equity with Atlantis or other formulations containing mesosulfuron-methyl / iodosulfuron-methyl.

Dow AgroSciences do not support tank mixes of Equity at Wheat Blossom midge timings.

**USE PLANT PROTECTION PRODUCTS SAFELY. ALWAYS READ THE LABEL AND PRODUCT INFORMATION BEFORE USE.
